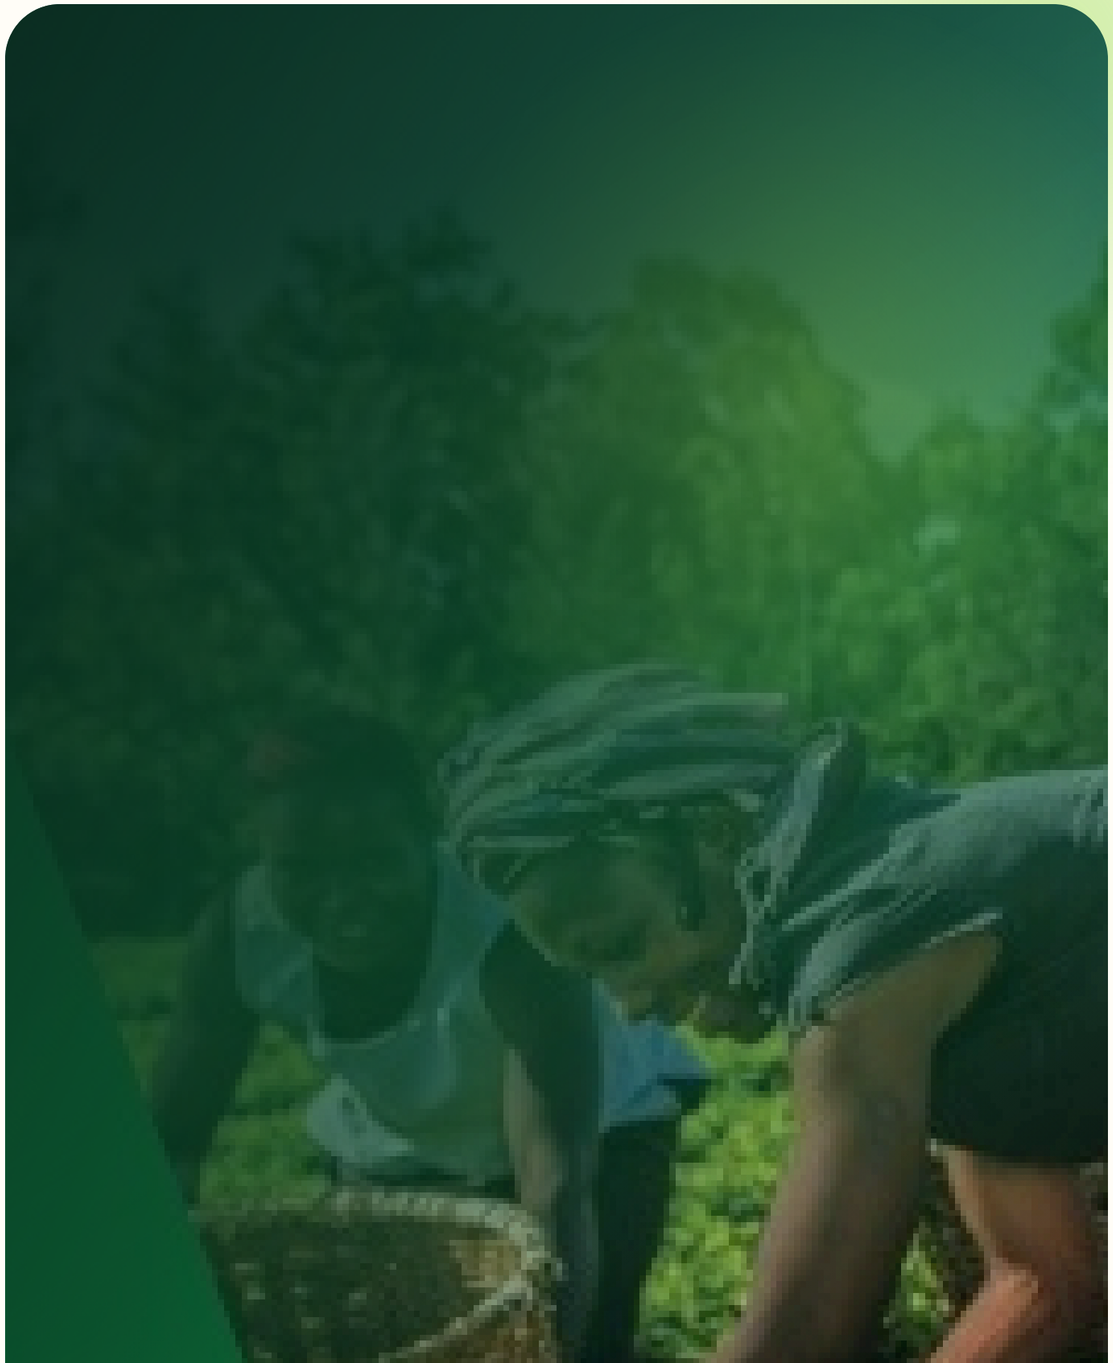
AgroDomain V2

INVESTOR AND PARTNER BRIEF

# An AI-first agricultural platform built for the full value chain.

AgroDomain V2 evolves the original end-to-end marketplace into a multi-agent operating layer for African and Caribbean agriculture: connecting trade, finance, advisory, traceability, and climate intelligence in one system.



PLATFORM SCOPE

# One platform across the agricultural value chain.

AgroDomain V2 is designed as a single operating surface for fragmented agricultural workflows, replacing siloed point solutions with connected intelligence and execution.

01 MARKETPLACE

## Trade and price discovery

Buyer-seller matching, multi-commodity listings, bid workflows, AI price signals, and transaction support.

02 AGFINTECH

## Wallet, credit, and insurance

Agro Purse wallet, mobile money rails, satellite-assisted credit scoring, and parametric crop protection.

03 ADVISORY

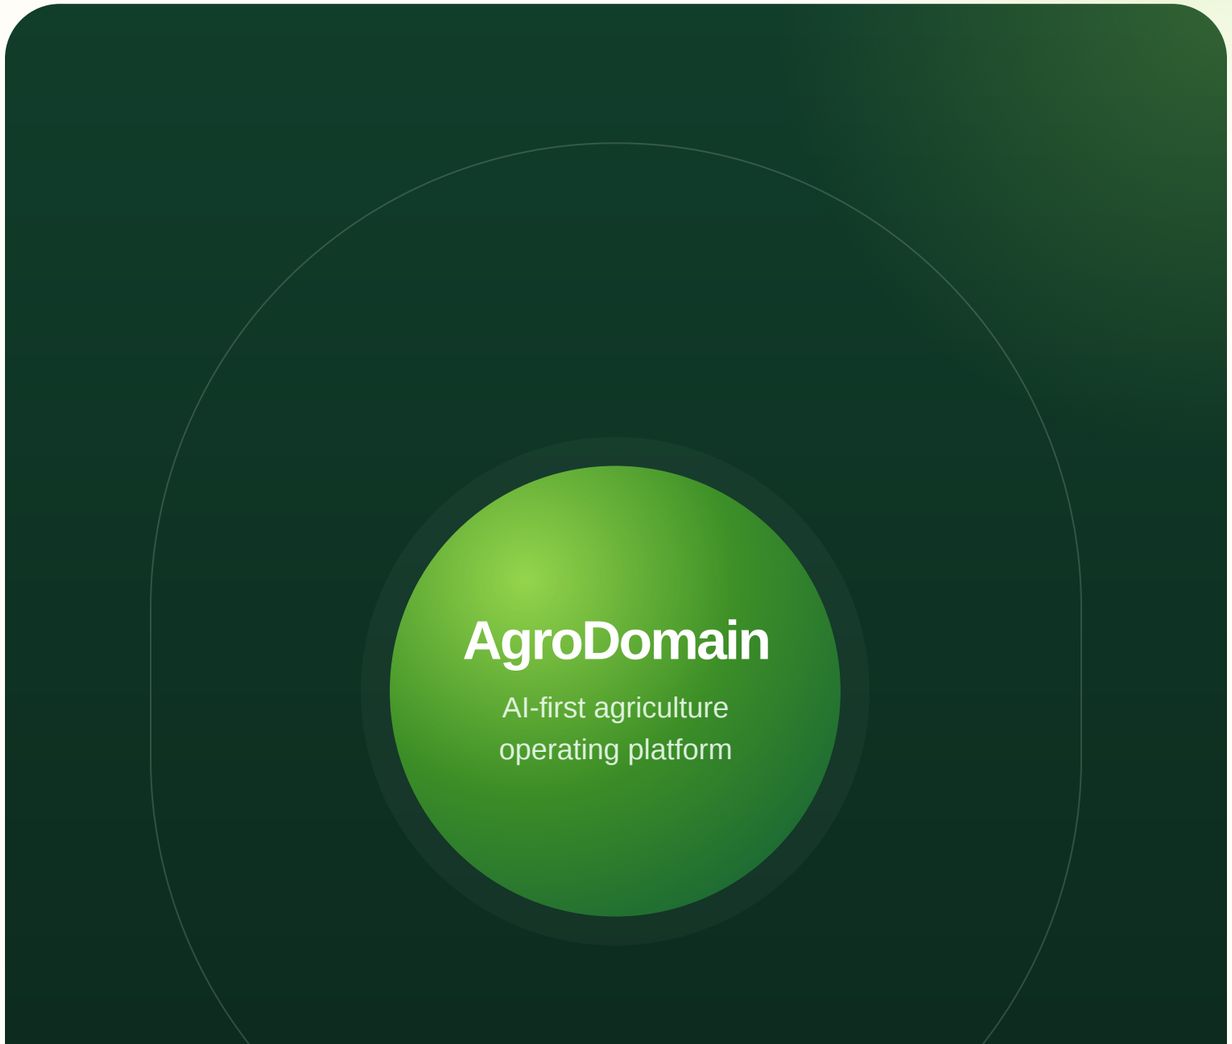
## Farmer guidance everywhere

Localized crop recommendations, disease diagnosis, and conversational support via WhatsApp, SMS, voice, and USSD.

04 SUPPLY CHAIN

## Traceability and logistics

Farm-to-buyer tracking, quality records, route optimization, and post-harvest loss prevention alerts.



V2 DIFFERENTIATION

# The jump from digital marketplace to agentic operating system.

The V2 roadmap centers on a seven-agent architecture. Each agent handles a specific domain, while an orchestrator and reviewer layer routes work, validates outputs, and keeps decisions auditable.

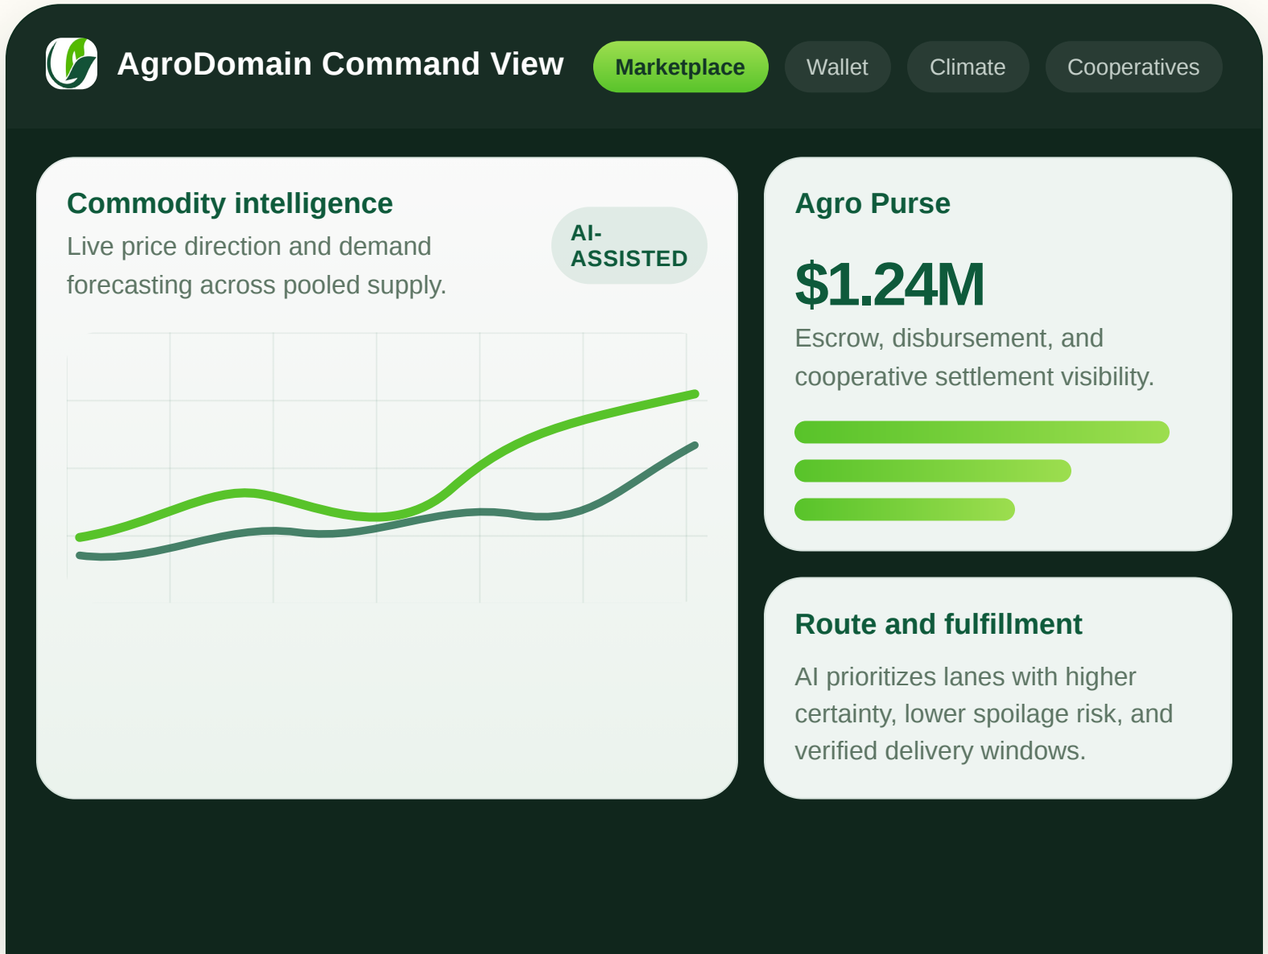
## Specialized AI agents

**01 Market Intelligence**
Price monitoring, demand signals, offer support, and negotiation guidance across commodities.

**02 Farm Advisory**
Crop recommendations, disease triage, and climate-smart advice delivered in local languages.

**03 Climate and MRV**
Weather risk, carbon estimation, land-use monitoring, and audit-ready reporting.

**04 Finance and Insurance**
Credit scoring, trigger-based insurance, wallet insights, and portfolio support.



WHY IT MATTERS

# Designed to create value for every stakeholder in the ecosystem.

AgroDomain V2 is not just software. It is a coordinated digital infrastructure play for market access, resilience, finance, and measurable agricultural performance.

## For farmers

- More reliable market access
- Localized advisory on familiar channels
- Potential access to credit and insurance
- Less friction moving produce and inputs

## For cooperatives

- Member management and pooled bargaining
- Shared wallet and settlement workflows
- Aggregate analytics and planning visibility
- Stronger institutional credibility with buyers

## For buyers and enterprises

- Verified supply and quality records
- Cleaner procurement coordination

## For capital and development partners

- Programmable finance and risk signals
- Climate and impact reporting pathways

PARTNER OPPORTUNITY

## AgroDomain can become the coordination layer between agricultural production, market access, and climate-linked capital.

The V2 architecture is intended for simultaneous relevance across West Africa and the Caribbean, with a roadmap already shaped around low-connectivity environments, cooperative economics, and enterprise-grade extensibility.

ROADMAP AND CALL TO ACTION

# A credible path from roadmap to strategic platform.

The current plan sequences platform buildout from foundation and multi-channel access through marketplace, wallet, agents, climate intelligence, finance, and enterprise analytics.

1

**Foundation and access**
Infrastructure, data model, authentication, and adaptive access via USSD, WhatsApp, SMS, and web.

2

**Marketplace and wallet**
Core commercial workflows: listings, offers, matching, escrow, settlement, and cooperative trading structures.

3

**AI layer and specialist agents**
Orchestrator plus market, advisory, climate, finance, and supply-chain agents coordinated inside one product system.

4

**Enterprise expansion**
Traceability depth, analytics products, white-label deployment, API access, and broader regional

WHY ENGAGE NOW

## AgroDomain V2 is seeking the right partners to shape scale, distribution, and capital alignment early.

The opportunity is to participate before the market surface hardens: influencing infrastructure, channel strategy, financing models, and ecosystem integration across high-potential agricultural markets.

**Ideal partners: strategic investors, climate-finance players, insurers, agri-buyers, governments, and distribution ecosystems**
